

Purpose

Technique LSTALLOW sets the number of hours past the current clock time that Technique LSTCMPDY can be set.

Valid values are 0 through 72.

The Global default is 0.

This Technique is Universal.

Form of Input

LSTALLOW(integer)

where integer is a value 0 through 72 and is the number of hours beyond the current clock time that LSTCMPDY can be set

Examples

LSTALLOW(12)

This will not allow LSTCMPDY to be set more than 12 hours beyond the current clock time.

LSTALLOW(3)

This will not allow LSTCMPDY to be set more than 3 hours beyond the current clock time.

LSTALLOW(0)

This will not allow LSTCMPDY to be set beyond the current clock time.
